

**Re: Mobile Mic Holder, by KD8HYT, QST Oct. 2013, p67
Hints & Kinks**

KD8HYT describes an innovative way of keeping a mic off the floor, using a hook adapted to the cigarette lighter socket. However in my Jeep, the cigarette lighter socket is located too low to use in this way. I finally came up with a simple, but perhaps not-so-elegant solution, as you can see in the photo.

I used a common, flat, picture-hanging hook, the kind intended for use on a wall, with a single nail.

The hook is secured to one of the lower ventilation louvers in the vehicle A/C vent with 2 black nylon cable ties at 90 degrees to one another.

The use of 2 ties in this way keeps the hook perpendicular to the surface and just out of the airstream from the vent.

The use of 2 ties keeps the hook perpendicular to the surface.

(Critics have said I should have painted the hook black for improved appearance!)

Oh well.
